

My end of the year speech

This was the best school year of my life. When I was in public schools, I was playing around and didn't want to go to class or do my work. The Community School helped me find my love for math again and helped me like school for the first time. I'm glad I decided to come here because, if I was still in public schools, I wouldn't be doing well.

The Community School changed my shyness of reading out loud to the point where, now, I like presenting Power Points. Other things I really like about The Community School are that it's a small group of students, none of the students make fun of you here, and everyone helps everyone else out.

I'm really glad I am part of The Community School because we are good students and we accomplish a lot. I hope next year will be just like this year, but better and more fun. And I hope we get the portfolio program to help 18 and over students get their High School Diploma. That program would be fun to try out.
